

Multi-layer pyramid defogging filter mesh

多层金字塔除雾滤网

• 应用原理Application principle:

由多层金字塔结构滤网组成,使得液滴和粉尘在滤网的特殊空间中运动,从而被截留捕获下来。

It consists of a multi-layer pyramid structure filter mesh that allows droplets and dust to move in the special space of the screen and is trapped and captured.

• 性能参数Performance parameter:

分离颗粒Separation

去除效率Removal efficiency:90%

烟气流速 Air flow:3.5-5.5m/s

压力降Pressure drop<100pa

• 应用Application:

过滤精度要求高的工况;雾气中含有粉尘的工况。
High filtration in conditions when the mist contains dust.

• 特点 Feature:

过滤精度高,可以过滤水雾、灰尘及粉末;
High filtration, which can filter water mist, dust and powder;

压降小,效率高,不容易堵,可清洗反复使用;
Low pressure drop, high efficiency, blocked not easily, washable and permanent;

可根据工况量身定制。
Spec. to be customized as your request.V
